

NATIONAL E-HEALTH RECORDS

ENTERPRISE TRAINING

The Personally Controlled eHealth Record System (PCEHR) is a national service that provides a single source for health information about consumers. The PCEHR is a life-long health record that any health provider can contribute clinical information to and utilise in making informed clinical decisions about consumers.

This workshop provides a look at the features of the National PCEHR System, and the role it plays in providing secure and consumer-controlled access to personal health information.

The workshop will cover the requirements driving the overall architecture of the national service, the various types of clinical documents and terminology's used, as well as an overview of the access control mechanisms used to protect the consumer.

The PCEHR is poised to revolutionise the way in which health information is shared and used in clinical settings, as well as empowering the consumer to drive their healthcare planning and outcomes.

Topics

- eHealth Records
- Health Identifiers
- Clinical Documents
- Terminology and Vocabularies
- Privacy and Security
- Participation
- eHealth Standards Interoperability
- PCEHR Architecture
- PCEHR Operations
